REASONS FOR ALLOWANCE

1. Claims 1-28 will be allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not provide for nor suggests providing for as follows:

A method for classifying email messages, the method comprising:

using a plurality of the independent modules to determine a level of sameness of the received email message with one or more prior email messages, wherein each module being used determines a level of sameness in a different manner than the other modules being used, and wherein at least some of the modules being used are each assigned a non-zero weight indicative of the module's performance level;

determining an overall level of sameness for the received email message by combining results of at least two of the plurality of independent modules using the non-zero weights assigned to the modules;

evaluating the performance level for each of the independent modules that were used to determine the level of sameness for the received email message;

comparing the performance levels evaluated for the independent modules that were used to determine the level of sameness for the received email message;

adjusting the non-zero weights of at least two of the modules in response to comparing the performance levels, including increasing the non-zero weight of at least one of the modules and reducing the non-zero weight of at least another one of the modules; and

using the overall level of sameness determined for the received email message to classify the received email message into a category.

The closest prior art (Glass et al. Patent Pub. No. 2005/0060643 A1) teaches a system and a method to provide classification of email compared to the sets of content chunks comprising each of a set of previously classified sample emails in order to determine a highest level of resemblance between an unclassified email and any of set of previously classified email (see, page 16, paragraph [0195]-[0196]).

Glass does not teach that the plurality of independent modules are assigned non-zero weights based on the performances of the combined results of at least two of the plurality of independent modules and adjusting the non-zero weights in response to the comparing the performance levels (see, applicant's published specification page 2, paragraph [0011]-[0012]).

For these reasons, in conjunction with the other limitations of the independent claim, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
